SENTRY SHIELD BULLETPROOF INSERT

for backpacks and laptop bags

TWGJ129

Dimension: 16.25" x 11.75" | Weight: 1.74 lbs

OVERVIEW

The SENTRYSHIELD bulletproof insert is protective equipment designed to fit inside a backpack or bag. Layered with ultra-high-molecular-weight polyethylene (UHMWPE) fibers, these ballistic-resistant materials passed authorized testing to prevent penetration from a range of handgun ammunition. The bulletproof insert comes in two sizes: one size that fits 17" standard backpacks and the other that fits 15" youth backpacks and laptop bags.

TWGJ1299

Dimension: 14" x 10" | Weight: 1.46 lbs

STRIKE FACE SIDE FACES OUTWARD

HOW TO USE

Avoid exposing your insert to excessive heat and placing it in a position that may cause it to bend or deform inside. Frequent heat exposure and abrasions will cause its fiber material to separate and render it ineffective.

STEP 1: Face your bulletproof insert's Strike Face logo outwards and away from your body before fitting it against the flat wall of your carrier.

STEP 2: Press firmly along the edges of the insert to ensure proper fitting and alignment inside your carrier. Do not place additional contents between the insert and flat wall, as this will cause the insert to sit unevenly.

Fits 17" standard backpacks

Fits 15" youth backpacks and laptop bags

NIJ CERTIFIED

National Institute of Justice standard Threat Level IIIA
to NIJ standard 0101.06

What are NIJ standards?

Since 1972, the National Institution of Justice (NIJ) authorizes and updates equipment standards and testing for body armor that addresses the requirements for law enforcement, correction agencies, and other criminal justice bureaus. They endorse articulated practice in establishing standards for equipment that is secure, trustworthy, and qualified to perform according to minimum specifications. The NIJ standards are accepted nationwide and set the criterion for ballistic-resistant body armor.

What is Level IIIA?

Based on NIJ standards, there are specific classifications of body armor categorized in levels of ballistic performance and resistance. Level IIIA body armor is a soft armor conditioned with materials used to protect against a variety of small arm weapons. This category is tested to slow down 9 mm Full Metal Jacketed Round Nose rounds, .44 Magnum Semi Jacketed Hollow Point bullets, and .357 SIG ammunition fired from handguns.

What are the benefits?

Bullet proof equipment is designed to slow bullets down in order to reduce chances of penetration and blunt force trauma. The bulletproof insert meets NIJ Level IIIA standards of body armor for providing maximum protection against a range of ballistic threats. Its soft and lightweight material ensures flexibility for adapting to proper conditions and placements when equipping this grade. With its width at 10 mm, this Level IIIA equipment can deter small arm weapons without occupying too much bag space.
